Description:

The overall system and showing that it works for sugar look to be working. I know there may be enhancements in the futures as we keep expanding this, but to get us started, it makes sense to me.

Thanks,

Cather,

The new Sugar Integration is being scheduled to be deployed this Thursday. With that deployment the Email System is going to be needed to be deployed as well so that the Talend Job is able to send out error emails.

Attached is my test plan that shows the system is working.

Do I have approval to move forward with deployment of the email system?

The only thing as of right now that will be using the system is Talend.

For review, here's the original request:

Came across procedures that have hard coded emails within our system:

- [PRODUCT_INFO].[PIM].[EnterworksEmail]
- [Accounting].[WellsFargo].[BuildFile]
- [PRODUCT_INFO].[dbo].[Untiers_ErrorEmail]

We need to implement a system be able to query email addresses to use instead of hard coding the address. Benefits would be that instead of having to modify procedures we can just add or remove records from tables for emails.

Further design will be needed for this.
