For review, here's the original request:

Came across procedures that have hard coded emails within our system:

- [PRODUCT_INFO].{PIM}.{EnterworksEmail]
- [Accounting].[WellsFargo].[BuildFile]
- [PRODUCT_INFO].[dbo].[Untiers_ErrorEmail]

We need to implement a system be able to query email addresses to use instead of hard coding the address. Benefits would be that instead of having to modify procedures we can just add or remove records from tables for emails.
Further design will be needed for this.
